Gene Name: PCBP3

Gene Alias: ALPHA-CP3

Gene Description: poly(rC) binding protein 3

Omim ID: [608502](#)

Gene Ontology: [Hyperlink](#)

Gene Summary: This gene encodes a member of the KH-domain protein subfamily. Proteins of this subfamily, also referred to as alpha-CPs, bind to RNA with a specificity for C-rich pyrimidine regions. Alpha-CPs play important roles in post-transcriptional activities and have different cellular distributions. This gene's protein is found in the cytoplasm, yet it lacks the nuclear localization signals found in other subfamily members. Alternative splicing results in multiple transcript variants encoding distinct isoforms. [provided by RefSeq]
