Gene Ontology	Hyperlink
Gene Summary	The protein encoded by this gene is a member of the interleukin 1 cytokine family. This cytokine is a pleiotropic cytokine involved in various immune responses, inflammatory processes, and hemat opoiesis. This cytokine is produced by monocytes and macrophages as a proprotein, which is pr oteolytically processed and released in response to cell injury, and thus induces apoptosis. This g ene and eight other interleukin 1 family genes form a cytokine gene cluster on chromosome 2. It h as been suggested that the polymorphism of these genes is associated with rheumatoid arthritis and Alzheimer's disease. [provided by RefSeq
