HLA-A/HLA-B/HLA-C monoclonal antibody, clone 246-B8.E7

Catalog # MAB21224 Size 100 ug

Specification

Product Description	Mouse monoclonal antibody raised against human HLA-A/HLA-B/HLA-C.
Immunogen	Human peripheral blood leukocytes.
Host	Mouse
Theoretical MW (kDa)	~41
Reactivity	Human
Form	Liquid
Purification	Protein A/G purification
Isotype	IgG2a, kappa
Recommend Usage	Flow Cytometry (0.5-1 ug/10^6 cells in 0.1 mL) Immunofluorescence (0.5-1 ug/mL) The optimal working dilution should be determined by the end user.
Storage Buffer	In 10 mM PBS.
Storage Instruction	Store at -20 to -80°C. Aliquot to avoid repeated freezing and thawing.

Applications

- Immunofluorescence
- Flow Cytometry

Gene Info — HLA-A

Copyright © 2023 Abnova Corporation. All Rights Reserved.

Entrez GeneID	3105
Gene Name	HLA-A
Gene Alias	HLAA
Gene Description	major histocompatibility complex, class I, A
Omim ID	106300 142800 608579
Gene Ontology	Hyperlink
Gene Summary	HLA-A belongs to the HLA class I heavy chain paralogues. This class I molecule is a heterodimer consisting of a heavy chain and a light chain (beta-2 microglobulin). The heavy chain is anchored i n the membrane. Class I molecules play a central role in the immune system by presenting peptid es derived from the endoplasmic reticulum lumen. They are expressed in nearly all cells. The heav y chain is approximately 45 kDa and its gene contains 8 exons. Exon 1 encodes the leader peptid e, exons 2 and 3 encode the alpha1 and alpha2 domains, which both bind the peptide, exon 4 en codes the alpha3 domain, exon 5 encodes the transmembrane region, and exons 6 and 7 encode the cytoplasmic tail. Polymorphisms within exon 2 and exon 3 are responsible for the peptide bind ing specificity of each class one molecule. Typing for these polymorphisms is routinely done for b one marrow and kidney transplantation. Hundreds of HLA-A alleles have been described. [provid ed by RefSeq
Other Designations	HLA class I histocompatibility antigen, A-23 alpha chain|MHC class I antigen HLA-A heavy chain| MHC leukocyte antigen|OTTHUMP00000161059|antigen presenting molecule|leucocyte antigen c lass I|leukocyte antigen class I-A

Gene Info — HLA-B

Entrez GeneID	3106
Gene Name	HLA-B
Gene Alias	AS, HLA-B-7301, HLA-B73, HLAB, HLAC, SPDA1
Gene Description	major histocompatibility complex, class I, B
Omim ID	106300 142830 608579
Gene Ontology	Hyperlink

Gene Summary	HLA-B belongs to the HLA class I heavy chain paralogues. This class I molecule is a heterodimer consisting of a heavy chain and a light chain (beta-2 microglobulin). The heavy chain is anchored i n the membrane. Class I molecules play a central role in the immune system by presenting peptid es derived from the endoplasmic reticulum lumen. They are expressed in nearly all cells. The heav y chain is approximately 45 kDa and its gene contains 8 exons. Exon 1 encodes the leader peptid e, exon 2 and 3 encode the alpha1 and alpha2 domains, which both bind the peptide, exon 4 enc odes the alpha3 domain, exon 5 encodes the transmembrane region and exons 6 and 7 encode t he cytoplasmic tail. Polymorphisms within exon 2 and exon 3 are responsible for the peptide bindi ng specificity of each class one molecule. Typing for these polymorphisms is routinely done for bo ne marrow and kidney transplantation. Hundreds of HLA-B alleles have been described. [provide d by RefSeq
Other Designations	HLA class I histocompatibility antigen, B alpha chain|HLA class I histocompatibility antigen, B-7 al pha chain|HLA class I histocompatibility antigen, Cw-5 alpha chain|HLA-B alpha chain (HLA-B*73 01)|MHC Class I HLA heavy chain|MHC HLA-B cell surface glycop

Gene Info — HLA-C

Entrez GeneID	3107
Gene Name	HLA-C
Gene Alias	D6S204, FLJ27082, HLA-Cw, HLA-Cw12, HLA-JY3, HLC-C, PSORS1
Gene Description	major histocompatibility complex, class I, C
Omim ID	142840 177900
Gene Ontology	Hyperlink
Gene Summary	HLA-C belongs to the HLA class I heavy chain paralogues. This class I molecule is a heterodimer consisting of a heavy chain and a light chain (beta-2 microglobulin). The heavy chain is anchored i n the membrane. Class I molecules play a central role in the immune system by presenting peptid es derived from endoplasmic reticulum lumen. They are expressed in nearly all cells. The heavy ch ain is approximately 45 kDa and its gene contains 8 exons. Exon one encodes the leader peptide , exons 2 and 3 encode the alpha1 and alpha2 domain, which both bind the peptide, exon 4 enco des the alpha3 domain, exon 5 encodes the transmembrane region, and exons 6 and 7 encode th e cytoplasmic tail. Polymorphisms within exon 2 and exon 3 are responsible for the peptide bindin g specificity of each class one molecule. Typing for these polymorphisms is routinely done for bon e marrow and kidney transplantation. Over one hundred HLA-C alleles have been described [prov ided by RefSeq
Other Designations	HLA class I antigen|HLA class I heavy chain|HLA class I histocompatibility antigen, C alpha chain| HLA-C (Cw*1201)|HLA-Cw*050x|MHC class I HLA-C|MHC class I HLA-Cw*0803|MHC class I ant igen HLA-C|MHC class I antigen heavy chain HLA-C|MHC class I protein HLA
