ITGB1 monoclonal antibody, clone DF5

Catalog # MAB5252 Size

Specification

Product Description	Mouse monoclonal antibody raised against native ITGB1.
Immunogen	Native purified human ITGB1.
Host	Mouse
Reactivity	Human
Specificity	This antibody reacts with the beta1 subunit of the integrin protein family and seems to be human specific. This antibody reacts with an extracellular epitope of the beta1 integrin molecule. beta1 -Integrins mediate cell-extracellular matrix interactions and share a common beta-subunit. Numerous studies have shown that beta1 -Integrins have a distinct and wide cellular distribution and that there are alterations in malignant cells in their beta1-integrin expression.
Form	Liquid
Isotype	IgG1
Recommend Usage	Western Blot (1:1000) The optimal working dilution should be determined by the end user.
Storage Buffer	In PBS (1% BSA, 0.09% sodium azide)
Storage Instruction	Store at 4°C.
Note	This product contains sodium azide: a POISONOUS AND HAZARDOUS SUBSTANCE which should be handled by trained staff only.

Applications

- Immunohistochemistry (Formalin/PFA-fixed paraffin-embedded sections)
- Immunohistochemistry (Frozen sections)
- Western Blot

Gene Info — ITGB1

Entrez GeneID	3688
Gene Name	ITGB1
Gene Alias	CD29, FNRB, GPIIA, MDF2, MSK12, VLA-BETA, VLAB
Gene Description	integrin, beta 1 (fibronectin receptor, beta polypeptide, antigen CD29 includes MDF2, MSK12)
Omim ID	135630
Gene Ontology	Hyperlink
Gene Summary	Integrins are heterodimeric proteins made up of alpha and beta subunits. At least 18 alpha and 8 beta subunits have been described in mammals. Integrin family members are membrane receptor s involved in cell adhesion and recognition in a variety of processes including embryogenesis, he mostasis, tissue repair, immune response and metastatic diffusion of tumor cells. This gene enco des a beta subunit. Multiple alternatively spliced transcript variants which encode different protein isoforms have been found for this gene. [provided by RefSeq
