

# MMP2 & A2M Protein Protein Interaction Antibody Pair

Catalog # DI0038      Size 1 Set

## Applications

Representative image of Proximity Ligation Assay of protein-protein interactions between MMP2 and A2M. HeLa cells were stained with anti-MMP2 rabbit purified polyclonal antibody 1:1200 and anti-A2M mouse monoclonal antibody 1:50. Each red dot represents the detection of protein-protein interaction complex. The images were analyzed using an optimized freeware (BlobFinder) download from The Centre for Image Analysis at Uppsala University.

## Specification

**Product Description**      This protein protein interaction antibody pair set comes with two antibodies to detect the protein-protein interaction, one against the MMP2 protein, and the other against the A2M protein for use in [in situ Proximity Ligation Assay](#). [See Publication Reference below](#).

**Reactivity**      Human

**Quality Control Testing**      Protein protein interaction immunofluorescence result.  
 Representative image of Proximity Ligation Assay of protein-protein interactions between MMP2 and A2M. HeLa cells were stained with anti-MMP2 rabbit purified polyclonal antibody 1:1200 and anti-A2M mouse monoclonal antibody 1:50. Each red dot represents the detection of protein-protein interaction complex. The images were analyzed using an optimized freeware (BlobFinder) download from The Centre for Image Analysis at Uppsala University.

**Supplied Product**      Antibody pair set content:  
 1. MMP2 rabbit purified polyclonal antibody (100 ug)  
 2. A2M mouse monoclonal antibody (40 ug)  
 \*Reagents are sufficient for at least 30-50 assays using recommended protocols.

**Storage Instruction**      Store reagents of the antibody pair set at -20°C or lower. Please aliquot to avoid repeated freeze thaw cycle. Reagents should be returned to -20°C storage immediately after use.

## Applications

- *In situ* Proximity Ligation Assay (Cell)

## Gene Info — A2M

Entrez GeneID	<a href="#">2</a>
Gene Name	A2M
Gene Alias	CPAMD5, DKFZp779B086, FWP007, S863-7
Gene Description	alpha-2-macroglobulin
Omim ID	<a href="#">103950</a> <a href="#">104300</a>
Gene Ontology	<a href="#">Hyperlink</a>
Gene Summary	Alpha-2-macroglobulin is a protease inhibitor and cytokine transporter. It inhibits many proteases, including trypsin, thrombin and collagenase. A2M is implicated in Alzheimer disease (AD) due to its ability to mediate the clearance and degradation of A-beta, the major component of beta-amyloid deposits. [provided by RefSeq]
Other Designations	-

## Gene Info — MMP2

Entrez GeneID	<a href="#">4313</a>
Gene Name	MMP2
Gene Alias	CLG4, CLG4A, MMP-II, MONA, TBE-1
Gene Description	matrix metalloproteinase 2 (gelatinase A, 72kDa gelatinase, 72kDa type IV collagenase)
Omim ID	<a href="#">120360</a> <a href="#">277950</a> <a href="#">605156</a>
Gene Ontology	<a href="#">Hyperlink</a>
Gene Summary	Proteins of the matrix metalloproteinase (MMP) family are involved in the breakdown of extracellular matrix in normal physiological processes, such as embryonic development, reproduction, and tissue remodeling, as well as in disease processes, such as arthritis and metastasis. Most MMP's are secreted as inactive proproteins which are activated when cleaved by extracellular proteinases. This gene encodes an enzyme which degrades type IV collagen, the major structural component of basement membranes. The enzyme plays a role in endometrial menstrual breakdown, regulation of vascularization and the inflammatory response. Mutations in this gene have been associated with Winchester syndrome and Nodulosis-Arthropathy-Osteolysis (NAO) syndrome. Two transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq]

## Other Designations

collagenase type IV-A|matrix metalloproteinase 2|matrix metalloproteinase-III|neutrophil gelatinase
