## PRKCD & GRM5 Protein Protein Interaction Antibody Pair

Catalog # DI0234 Size 1 Set

### Applications

Representative image of Proximity Ligation Assay of protein-protein interactions between PRKCD and GRM5. HeLa cells were stained with anti-PRKCD rabbit purified polyclonal antibody 1:1200 and anti-GRM5 mouse monoclonal antibody 1:50. Each red dot represents the detection of protein-protein interaction complex. The images were analyzed using an optimized freeware (BlobFinder) download from The Centre for Image Analysis at Uppsala University.

Specification	
Product Description	This protein protein interaction antibody pair set comes with two antibodies to detect the protein-prot ein interaction, one against the PRKCD protein, and the other against the GRM5 protein for use in <u>in</u> <u>situ</u> Proximity Ligation Assay. See Publication Reference below.
Reactivity	Human
Quality Control Testing	Protein protein interaction immunofluorescence result. Representative image of Proximity Ligation Assay of protein-protein interactions between PRKCD a nd GRM5. HeLa cells were stained with anti-PRKCD rabbit purified polyclonal antibody 1:1200 and anti-GRM5 mouse monoclonal antibody 1:50. Each red dot represents the detection of protein-protei n interaction complex. The images were analyzed using an optimized freeware (BlobFinder) downloa d from The Centre for Image Analysis at Uppsala University.
Supplied Product	Antibody pair set content: 1. PRKCD rabbit purified polyclonal antibody (100 ug) 2. GRM5 mouse monoclonal antibody (40 ug) *Reagents are sufficient for at least 30-50 assays using recommended protocols.
Storage Instruction	Store reagents of the antibody pair set at -20°C or lower. Please aliquot to avoid repeated freeze tha w cycle. Reagents should be returned to -20°C storage immediately after use.

Gene Info — GRM5		
Entrez GenelD	<u>2915</u>	
Gene Name	GRM5	
Gene Alias	GPRC1E, MGLUR5, mGlu5	
Gene Description	glutamate receptor, metabotropic 5	
Omim ID	<u>604102</u>	
Gene Ontology	Hyperlink	
Gene Summary	L-glutamate is the major excitatory neurotransmitter in the central nervous system and activates b oth ionotropic and metabotropic glutamate receptors. Glutamatergic neurotransmission is involve d in most aspects of normal brain function and can be perturbed in many neuropathologic conditio ns. The metabotropic glutamate receptors are a family of G protein-coupled receptors, that have b een divided into 3 groups on the basis of sequence homology, putative signal transduction mecha nisms, and pharmacologic properties. Group I includes GRM1 and GRM5 and these receptors ha ve been shown to activate phospholipase C. Group II includes GRM2 and GRM3 while Group III in cludes GRM4, GRM6, GRM7 and GRM8. Group II and III receptors are linked to the inhibition of th e cyclic AMP cascade but differ in their agonist selectivities. Multiple transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq	
Other Designations	-	

Gene Info — PRKCD		
Entrez GenelD	5580	
Gene Name	PRKCD	
Gene Alias	MAY1, MGC49908, PKCD, nPKC-delta	
Gene Description	protein kinase C, delta	
Omim ID	<u>176977</u>	
Gene Ontology	Hyperlink	

🍟 Abnova	Product Information
Gene Summary	Protein kinase C (PKC) is a family of serine- and threonine-specific protein kinases that can be a ctivated by calcium and the second messenger diacylglycerol. PKC family members phosphorylat e a wide variety of protein targets and are known to be involved in diverse cellular signaling pathw ays. PKC family members also serve as major receptors for phorbol esters, a class of tumor pro moters. Each member of the PKC family has a specific expression profile and is believed to play distinct roles in cells. The protein encoded by this gene is one of the PKC family members. Studie s both in human and mice demonstrate that this kinase is involved in B cell signaling and in the re gulation of growth, apoptosis, and differentiation of a variety of cell types. Alternatively spliced tran script variants encoding the same protein have been observed. [provided by RefSeq
Other Designations	protein kinase C delta VIII

#### Pathway

- Calcium signaling pathway
- Chemokine signaling pathway
- Fc epsilon RI signaling pathway
- Fc gamma R-mediated phagocytosis
- Gap junction
- GnRH signaling pathway
- Long-term depression
- Long-term potentiation
- Neuroactive ligand-receptor interaction
- <u>Neurotrophin signaling pathway</u>
- Tight junction
- Type II diabetes mellitus
- <u>Vascular smooth muscle contraction</u>

#### Disease

- <u>Alcoholism</u>
- Anorexia Nervosa
- <u>Bulimia</u>
