

MAPK3 & RALGDS Protein Protein Interaction Antibody Pair

Catalog # DI0265

Size 1 Set

Applications

Representative image of Proximity Ligation Assay of protein-protein interactions between MAPK3 and RALGDS. HeLa cells were stained with anti-MAPK3 rabbit purified polyclonal antibody 1:1200 and anti-RALGDS mouse monoclonal antibody 1:50. Each red dot represents the detection of protein-protein interaction complex. The images were analyzed using an optimized freeware (BlobFinder) download from The Centre for Image Analysis at Uppsala University.

Specification

Product Description

Gene Summary	The protein encoded by this gene is a member of the MAP kinase family. MAP kinases, also known as extracellular signal-regulated kinases (ERKs), act in a signaling cascade that regulates various cellular processes such as proliferation, differentiation, and cell cycle progression in response to a variety of extracellular signals. This kinase is activated by upstream kinases, resulting in its translocation to the nucleus where it phosphorylates nuclear targets. Alternatively spliced transcript variants encoding different protein isoforms have been described. [provided by RefSeq]
