GeneBank Accession#	BC093837.1
Protein Accession#	AAH93837.1
Gene Name	ADCYAP1
Gene Alias	MGC126852, PACAP
Gene Description	adenylate cyclase activating polypeptide 1 (pituitary)
Omim ID	102980
Gene Ontology	Hyperlink
Gene Summary	This gene encodes adenylate cyclase activating polypeptide 1. Mediated by adenylate cyclase activating polypeptide 1 receptors, this polypeptide stimulates adenylate cyclase and subsequently increases the cAMP level in target cells. Adenylate cyclase activating polypeptide 1 is not only a hypophysiotropic hormone, but also functions as a neurotransmitter and neuromodulator. In addition, it plays a role in paracrine and autocrine regulation of certain types of cells. This gene encodes three different mature peptides, including two isoforms, a shorter form and a longer form. Two transcript variants encoding the same protein have been found for this gene. Other Designations	OTTHUMP00000162201 adenylate cyclase activating polypeptide
