Gene Name ALOX15B

Gene Alias 15-LOX-2

Gene Description arachidonate 15-lipoxygenase, type B

Omim ID [603697](#)

Gene Ontology [Hyperlink](#)

Gene Summary This gene encodes a member of the lipoxygenase family of structurally related nonheme iron dioxygenases involved in the production of fatty acid hydroperoxides. The encoded protein converts arachidonic acid exclusively to 15S-hydroperoxyeicosatetraenoic acid, while metabolizing linoleic acid less effectively. This gene is located in a cluster of related genes and a pseudogene that spans approximately 100 kilobases on the short arm of chromosome 17. Alternatively spliced transcript variants encoding different isoforms have been described. [provided by RefSeq]
