Gene Name	ATOX1
Gene Alias	ATX1, HAH1, MGC138453, MGC138455
Gene Description	ATX1 antioxidant protein 1 homolog (yeast)
Omim ID	602270
Gene Ontology	Hyperlink
Gene Summary	This gene encodes a copper chaperone that plays a role in copper homeostasis by binding and transporting cytosolic copper to ATPase proteins in the trans-Golgi network for later incorporation to the ceruloplasmin. This protein also functions as an antioxidant against superoxide and hydrogen peroxide, and therefore, may play a significant role in cancer carcinogenesis. Because of its cytoplasmic location, this gene represents a candidate gene for 5q-syndrome. [provided by RefSeq]
Other Designations	antioxidant protein 1 copper transport protein metal transport protein
