Gene Info — BCL7A

Entrez GeneID	605
GeneBank Accession#	NM_001024808.1
Protein Accession#	NP_001019979.1
Gene Name	BCL7A
Gene Alias	BCL7
Gene Description	B-cell CLL/lymphoma 7A
Omim ID	601406
Gene Ontology	Hyperlink
Gene Summary	This gene is directly involved, with Myc and IgH, in a three-way gene translocation in a Burkitt lymphoma cell line. As a result of the gene translocation, the N-terminal region of the gene product is disrupted, which is thought to be related to the pathogenesis of a subset of high-grade B cell non-Hodgkin lymphoma. The N-terminal segment involved in the translocation includes the region that shares a strong sequence similarity with those of BCL7B and BCL7C. Two transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq]
Other Designations	B-cell CLL/lymphoma-7
