

Full-Length

BRCA1 (Human) Recombinant Protein (P01)

Catalog # H00000672-P01

Size 25 ug, 10 ug

Applications

Specification

Product Description	Human BRCA1 full-length ORF (NP_009237.1, 1 a.a. - 59 a.a.) recombinant protein with GST-tag at N-terminal.
Sequence	MDLSALRVEEVQNVINAMQKILECPICLELIKEPVSTKCDHIFCKVLLCCPSWSTVVRS
Host	Wheat Germ (in vitro)
Theoretical MW (kDa)	33.1
Preparation Method	in vitro wheat germ expression system
Purification	Glutathione Sepharose 4 Fast Flow
Quality Control Testing	12.5% SDS-PAGE Stained with Coomassie Blue.
Storage Buffer	50 mM Tris-HCl, 10 mM reduced Glutathione, pH=8.0 in the elution buffer.
Storage Instruction	Store at -80°C. Aliquot to avoid repeated freezing and thawing.
Note	Best use within three months from the date of receipt of this protein.

Applications

- Enzyme-linked Immunoabsorbent Assay
- Western Blot (Recombinant protein)
- Antibody Production
- Protein Array

Gene Info — BRCA1

Entrez GeneID [672](#)

GeneBank Accession# [NM_007306.2](#)

Protein Accession# [NP_009237.1](#)

Gene Name BRCA1

Gene Alias BRCA1, BRCC1, IRIS, PSCP, RNF53

Gene Description breast cancer 1, early onset

Omim ID [113705](#)

Gene Ontology [Hyperlink](#)

Gene Summary

This gene encodes a nuclear phosphoprotein that plays a role in maintaining genomic stability, and it also acts as a tumor suppressor. The encoded protein combines with other tumor suppressors, DNA damage sensors, and signal transducers to form a large multi-subunit protein complex known as the BRCA1-associated genome surveillance complex (BASC). This gene product associates with RNA polymerase II, and through the C-terminal domain, also interacts with histone deacetylase complexes. This protein thus plays a role in transcription, DNA repair of double-stranded breaks, and recombination. Mutations in this gene are responsible for approximately 40% of inherited breast cancers and more than 80% of inherited breast and ovarian cancers. Alternative splicing plays a role in modulating the subcellular localization and physiological function of this gene. Many alternatively spliced transcript variants, some of which are disease-associated mutations, have been described for this gene, but the full-length nature of only some of these variants has been described. A related pseudogene, which is also located on chromosome 17, has been identified. [provided by RefSeq]

Other Designations BRCA1/BRCA2-containing complex, subunit 1|breast and ovarian cancer susceptibility protein 1
