

MaxPab®

CCNE1 MaxPab mouse polyclonal antibody (B01)

Catalog # H00000898-B01

Size 50 uL

Applications

Western Blot (Transfected lysate)

Western Blot analysis of CCNE1 expression in transfected 293T cell line ([H00000898-T01](#)) by CCNE1 MaxPab polyclonal antibody.

Lane 1: CCNE1 transfected lysate(45.21 KDa).

Lane 2: Non-transfected lysate.

Specification

Product Description	Mouse polyclonal antibody raised against a full-length human CCNE1 protein.
Immunogen	CCNE1 (AAH35498, 1 a.a. ~ 410 a.a) full-length human protein.
Sequence	MPRERRERDAKERDTMKEDGGAEFSAERSRKRIKANTVFLQDPDEETAKIDRTARDQCGSQPW DNNVACADPCSLIPTDPKEDDDRVYPNSTCKPRIAPSRGSPLPVLSWANREEVWKIMLNKEKTY LRDQHFLEQHPLLQPKMRAILLDWLMEVCEVYKLHRETFYLAQDFFDRYMATQENVVKTLQLIGI SSLFIAAKLEEMPPKLHQFAYVTDGACSGDEILTMELMIMKALKWRLSPLTVSWLNVYMQVAYLN DLHEVLLPQYPQQIFIQIAELLDLCVLDVDCLEFPYGLAASALYHFSSSELMQKVSGYQWCDIENC VKWMVPFAMVIRETGSSSKLKHFRGVADEDAHNIQTHRDSLDDKARAKKAMLSEQNRASPLPS GLLTPPQSGKKQSSGPEMA
Host	Mouse
Reactivity	Human
Quality Control Testing	Antibody reactive against mammalian transfected lysate.
Storage Buffer	No additive
Storage Instruction	Store at -20°C or lower. Aliquot to avoid repeated freezing and thawing.

Note For IHC and IF applications, antibody purification with Protein A will be needed prior to use.

Applications

- Western Blot (Transfected lysate)

Western Blot analysis of CCNE1 expression in transfected 293T cell line ([H00000898-T01](#)) by CCNE1 MaxPab polyclonal antibody.

Lane 1: CCNE1 transfected lysate(45.21 KDa).

Lane 2: Non-transfected lysate.

Gene Summary

The protein encoded by this gene belongs to the highly conserved cyclin family, whose members are characterized by a dramatic periodicity in protein abundance through the cell cycle. Cyclins function as regulators of CDK kinases. Different cyclins exhibit distinct expression and degradation patterns which contribute to the temporal coordination of each mitotic event. This cyclin forms a complex with and functions as a regulatory subunit of CDK2, whose activity is required for cell cycle G1/S transition. This protein accumulates at the G1-S phase boundary and is degraded as cells progress through S phase. Overexpression of this gene has been observed in many tumors, which results in chromosome instability, and thus may contribute to tumorigenesis. This protein was found to associate with, and be involved in, the phosphorylation of NPAT protein (nuclear protein mapped to the ATM locus), which participates in cell-cycle regulated histone gene expression and plays a critical role in promoting cell-cycle progression in the absence of pRB. Two alternatively spliced transcript variants of this gene, which encode distinct isoforms, have been described. Two additional splice variants were reported but detailed nucleotide sequence information is not yet available. [provided by RefSeq]
