Gene Name CDC25C

Gene Alias CDC25

Gene Description cell division cycle 25 homolog C (S. pombe)

Omim ID [157680](#)

Gene Ontology [Hyperlink](#)

Gene Summary This gene is highly conserved during evolution and it plays a key role in the regulation of cell division. The encoded protein is a tyrosine phosphatase and belongs to the Cdc25 phosphatase family. It directs dephosphorylation of cyclin B-bound CDC2 and triggers entry into mitosis. It is also thought to suppress p53-induced growth arrest. Multiple alternatively spliced transcript variants of this gene have been described, however, the full-length nature of many of them is not known. [provided by RefSeq]
