Gene Name	CRK
Gene Alias	CRKII
Gene Description	v-crk sarcoma virus CT10 oncogene homolog (avian)
Omim ID	<u>164762</u>
Gene Ontology	<u>Hyperlink</u>
Gene Summary	This gene encodes a member of an adapter protein family that binds to several tyrosine-phosphor ylated proteins. The product of this gene has several SH2 and SH3 domains (src-homology doma ins) and is involved in several signaling pathways, recruiting cytoplasmic proteins in the vicinity of t yrosine kinase through SH2-phosphotyrosine interaction. The N-terminal SH2 domain of this prote in functions as a positive regulator of transformation whereas the C-terminal SH3 domain function s as a negative regulator of transformation. Two alternative transcripts encoding different isoforms with distinct biological activity have been described. [provided by RefSeq
