CSH2 rabbit monoclonal antibody

Catalog # H00001443-K

odification

Size 100 ug x up to 3

Specification	
Product Description	Rabbit monoclonal antibody raised against a human CSH2 peptide using ARM Technology.
Immunogen	A synthetic peptide of human CSH2 is used for rabbit immunization. Customer or Abnova will decide on the preferred peptide sequence.
Host	Rabbit
Library Construction	Non-fusion antibody library from rabbit spleen (ARM Technology).
Expression	Overexpression vector and transfection into 293H cell line.
Reactivity	Human
Purification	Protein A
lsotype	lgG
Quality Control Testing	Antibody reactive against human CSH2 peptide by ELISA and mammalian transfected lysate by We stern Blot.
Storage Buffer	In 1x PBS, pH 7.4
Storage Instruction	Store at -20°C or lower. Aliquot to avoid repeated freezing and thawing.
Deliverable	Up to three rabbit IgG clones of 100 ug each will be delivered to customer.
Note	 Customer may provide cell or tissue lysate for antibody screening. Rabbit monoclonal antibody generated by ARM technology is amenable to antibody engineering in cluding F(ab)₂, lgG, scFv and different Fc and non-Fc conjugates per customer request.

Applications

• Western Blot (Transfected lysate)

Protocol Download

• ELISA

Gene Info — CSH2	
Entrez GenelD	<u>1443</u>
GeneBank Accession#	<u>CSH2</u>
Gene Name	CSH2
Gene Alias	CS-2, CSB, hCS-B
Gene Description	chorionic somatomammotropin hormone 2
Omim ID	<u>118820</u>
Gene Ontology	Hyperlink
Gene Summary	The protein encoded by this gene is a member of the somatotropin/prolactin family of hormones a nd plays an important role in growth control. The gene is located at the growth hormone locus on c hromosome 17 along with four other related genes in the same transcriptional orientation; an arra ngement which is thought to have evolved by a series of gene duplications. Although the five gene s share a remarkably high degree of sequence identity, they are expressed selectively in different tissues. Alternative splicing generates additional isoforms of each of the five growth hormones. Th is particular family member is expressed mainly in the placenta and utilizes multiple transcription i nitiation sites. Expression of the identical mature proteins for chorionic somatomammotropin hor mones 1 and 2 is upregulated during development, while the ratio of 1 to 2 increases by term. Str uctural and expression differences provide avenues for developmental regulation and tissue speci ficity. [provided by RefSeq
Other Designations	chorionic somatomammotropin B placental lactogen
