**Gene Summary** 

#### **Product Information**

This gene is one of two human genes similar to the yeast gene dph2. The yeast gene was identified by its ability to complement a diphthamide mutant strain, and thus probably functions in diphthamide biosynthesis. Diphthamide is a post-translationally modified histidine residue present in elo ngation factor 2 (EF2) that is the target of diphtheria toxin ADP-ribosylation. Two transcript variant s encoding different isoforms have been found for this gene. [provided by RefSeq
