Gene Info — EN1

Entrez GeneID	2019
GeneBank Accession#	EN1
Gene Name	EN1
Gene Alias	-
Gene Description	engrailed homeobox 1
Omim ID	131290
Gene Ontology	Hyperlink
Gene Summary	Homeobox-containing genes are thought to have a role in controlling development. In Drosophila, the 'engrailed' (en) gene plays an important role during development in segmentation, where it is required for the formation of posterior compartments. Different mutations in the mouse homologs, En1 and En2, produced different developmental defects that frequently are lethal. The human engrailed homologs 1 and 2 encode homeodomain-containing proteins and have been implicated in the control of pattern formation during development of the central nervous system.
