Gene Ontology	<u>Hyperlink</u>
Gene Summary	This gene encodes one of three enclase isoenzymes found in mammals; it encodes alpha-enclas e, a homodimeric soluble enzyme, and also encodes a shorter monomeric structural lens protein, tau-crystallin. The two proteins are made from the same message. The full length protein, the isoe nzyme, is found in the cytoplasm. The shorter protein is produced from an alternative translation st art, is localized to the nucleus, and has been found to bind to an element in the c-myc promoter. A pseudogene has been identified that is located on the other arm of the same chromosome. [provided by RefSeq
