Gene Name FABP5

Gene Alias E-FABP, EFABP, PA-FABP, PAFABP

Gene Description fatty acid binding protein 5 (psoriasis-associated)

Omim ID [605168](#)

Gene Ontology [Hyperlink](#)

**Gene Summary** This gene encodes the fatty acid binding protein found in epidermal cells, and was first identified as being upregulated in psoriasis tissue. Fatty acid binding proteins are a family of small, highly conserved, cytoplasmic proteins that bind long-chain fatty acids and other hydrophobic ligands. It is thought that FABPs roles include fatty acid uptake, transport, and metabolism. The human genome contains many pseudogenes similar to this locus. [provided by RefSeq]
