Gene Info — FGL1

Entrez GeneID	2267
Gene Name	FGL1
Gene Alias	HFREP1, HP-041, LFIRE1, MGC12455
Gene Description	fibrinogen-like 1
Omim ID	605776
Gene Ontology	Hyperlink
Gene Summary	Fibrinogen-like 1 is a member of the fibrinogen family. This protein is homologous to the carboxy terminus of the fibrinogen beta- and gamma- subunits which contains the four conserved cysteines of fibrinogens and fibrinogen related proteins. However, this protein lacks the platelet-binding site, cross-linking region and a thrombin-sensitive site which are necessary for fibrin clot formation. This protein may play a role in the development of hepatocellular carcinomas. Four alternatively spliced transcript variants encoding the same protein exist for this gene. [provided by RefSeq]
