Gene Name GATA2

Gene Alias MGC2306, NFE1B

Gene Description GATA binding protein 2

Omim ID [137295](#)

Gene Ontology [Hyperlink](#)

Gene Summary This gene encodes a member of the GATA family of zinc-finger transcription factors that are named for the consensus nucleotide sequence they bind in the promoter regions of target genes. The encoded protein plays an essential role in regulating transcription of genes involved in the development and proliferation of hematopoietic and endocrine cell lineages. Alternative splicing results in multiple transcript variants

Other Designations GATA-binding protein 2
