Product Information

Gene Summary

This gene encodes a member of the forkhead class of DNA-binding proteins. These hepatocyte n uclear factors are transcriptional activators for liver-specific genes such as albumin and transthyre tin, and they also interact with chromatin. Similar family members in mice have roles in the regulati on of metabolism and in the differentiation of the pancreas and liver. This gene has been linked to sporadic cases of maturity-onset diabetes of the young. Transcript variants encoding different isof orms have been identified for this gene. [provided by RefSeq
