

## HOXD8 rabbit monoclonal antibody

Catalog # H00003234-K Size 100 ug x up to 3

Specification           Product Description         Rabbit monoclonal antibody raised against a human HOXD8 peptide using ARM Technology.           Immunogen         A synthetic peptide of human HOXD8 is used for rabbit immunization. Customer or Abnova will decide on the preferred peptide sequence.           Host         Rabbit           Library Construction         Non-fusion antibody library from rabbit spleen (ARM Technology).           Expression         Overexpression vector and transfection into 293H cell line.           Reactivity         Human           Purification         Protein A           Isotype         IgG           Quality Control Testing         Antibody reactive against human HOXD8 peptide by ELISA and mammalian transfected lysate estern Blot.

Quality Control Testing Antibody reactive against human HOXD8 peptide by ELISA and mammalian transfected lysate	
	by W
Storage Buffer In 1x PBS, pH 7.4	
Storage Instruction Store at -20°C or lower. Aliquot to avoid repeated freezing and thawing.	
Deliverable Up to three rabbit lgG clones of 100 ug each will be delivered to customer.	
Note  1. Customer may provide cell or tissue lysate for antibody screening.  2. Rabbit monoclonal antibody generated by ARM technology is amenable to antibody engined cluding F(ab) <sub>2</sub> , lgG, scFv and different Fc and non-Fc conjugates per customer request.	ring in

## **Applications**

Western Blot (Transfected lysate)

Protocol Download

ELISA

Gene Info — HOXD8	
Entrez GenelD	<u>3234</u>
GeneBank Accession#	HOXD8
Gene Name	HOXD8
Gene Alias	HOX4, HOX4E, HOX5.4
Gene Description	homeobox D8
Omim ID	<u>142985</u>
Gene Ontology	<u>Hyperlink</u>
Gene Summary	This gene belongs to the homeobox family of genes. The homeobox genes encode a highly conserved family of transcription factors that play an important role in morphogenesis in all multicellular organisms. Mammals possess four similar homeobox gene clusters, HOXA, HOXB, HOXC and HOXD, located on different chromosomes, consisting of 9 to 11 genes arranged in tandem. This gene is one of several homeobox HOXD genes located in a cluster on chromosome 2. Deletions that tremove the entire HOXD gene cluster or the 5' end of this cluster have been associated with severe limb and genital abnormalities. In addition to effects during embryogenesis, this particular gene may also play a role in adult urogenital tract function. [provided by RefSeq
Other Designations	Hox-4.5, mouse, homolog of homeo box 4E homeo box D8 homeobox protein 5.4
