Gene Name HSF4

Gene Alias CTM

Gene Description heat shock transcription factor 4

Omim ID [116800 602438](#)

Gene Ontology [Hyperlink](#)

Gene Summary Heat-shock transcription factors (HSFs) activate heat-shock response genes under conditions of heat or other stresses. HSF4 lacks the carboxyl-terminal hydrophobic repeat which is shared among all vertebrate HSFs and has been suggested to be involved in the negative regulation of DNA binding activity. Two alternatively spliced transcripts encoding distinct isoforms and possessing different transcriptional activity have been described. [provided by RefSeq]
