

HTR2C polyclonal antibody (A01)

Catalog # H00003358-A01

Size 50 uL

Applications

Western Blot detection against Immunogen (31.83 KDa) .

Specification

Product Description	Mouse polyclonal antibody raised against a partial recombinant HTR2C.
Immunogen	HTR2C (NP_000859, 1 a.a. ~ 52 a.a) partial recombinant protein with GST tag.
Sequence	MVNLRNAVHSFLVHLIGLLVWQSDISVSPVAAMTDIFNTSDGGRFKFPDGV
Host	Mouse
Reactivity	Human
Interspecies Antigen Sequence	Mouse (81); Rat (81)
Quality Control Testing	Antibody Reactive Against Recombinant Protein. Western Blot detection against Immunogen (31.83 KDa) .
Storage Buffer	50 % glycerol
Storage Instruction	Store at -20°C or lower. Aliquot to avoid repeated freezing and thawing.

Applications

- Western Blot (Recombinant protein)

- ELISA

Gene Info — HTR2C

Entrez GeneID [3358](#)

GeneBank Accession# [NM_000868](#)

Protein Accession# [NP_000859](#)

Gene Name HTR2C

Gene Alias 5-HT2C, 5-HTR2C, HTR1C

Gene Description 5-hydroxytryptamine (serotonin) receptor 2C

Omim ID [312861](#)

Gene Ontology [Hyperlink](#)

Gene Summary Serotonin (5-hydroxytryptamine, 5-HT), a neurotransmitter, elicits a wide array of physiological effects by binding to several receptor subtypes, including the 5-HT2 family of seven-transmembrane-spanning, G-protein-coupled receptors, which activate phospholipase C and D signaling pathways. This gene encodes the 2C subtype of serotonin receptor and its mRNA is subject to multiple RNA editing events, where genomically encoded adenosine residues are converted to inosines. RNA editing is predicted to alter amino acids within the second intracellular loop of the 5-HT2C receptor and generate receptor isoforms that differ in their ability to interact with G proteins and the activation of phospholipase C and D signaling cascades, thus modulating serotonergic neurotransmission in the central nervous system. Studies in humans have reported abnormalities in patterns of 5-HT2C editing in depressed suicide victims. [provided by RefSeq]
