Gene Name IVD

Gene Alias ACAD2

Gene Description isovaleryl Coenzyme A dehydrogenase

Omim ID [243500 607036](#)

Gene Ontology [Hyperlink](#)

Gene Summary Isovaleryl-CoA dehydrogenase (IVD) is a mitochondrial matrix enzyme that catalyzes the third step in leucine catabolism. The genetic deficiency of IVD results in an accumulation of isovaleric acid, which is toxic to the central nervous system and leads to isovaleric acidemia. Alternatively spliced transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq]
