Gene Description NHP2 non-histone chromosome protein 2-like 1 (S. cerevisiae)

Omim ID [601304](#)

Gene Ontology [Hyperlink](#)

Gene Summary Originally named because of its sequence similarity to the *Saccharomyces cerevisiae* NHP2 (non-histone protein 2), this protein appears to be a highly conserved nuclear protein that is a component of the [U4/U6.U5] tri-snRNP. It binds to the 5' stem-loop of U4 snRNA. Two transcript variants encoding the same protein have been found for this gene. [provided by RefSeq]
