Gene Alias ALPS4, N-ras, NRAS1

Gene Description neuroblastoma RAS viral (v-ras) oncogene homolog

Omim ID [114500](#) [164790](#) [188470](#)

Gene Ontology [Hyperlink](#)

Gene Summary This is an N-ras oncogene encoding a membrane protein that shuttles between the Golgi apparatus and the plasma membrane. This shuttling is regulated through palmitoylation and depalmitoylation by the ZDHHC9-GOLGA7 complex. The encoded protein, which has intrinsic GTPase activity, is activated to a GTP-bound form by a GTPase activating protein and inactivated to a GDP-bound form by a guanine nucleotide-exchange factor. Defects in this gene are a cause of juvenile myelomonocytic leukemia (JMML). [provided by RefSeq]
