Product Information

Gene Summary

The protein encoded by this gene belongs to the subtilisin-like proprotein convertase family. The members of this family are proprotein convertases that process latent precursor proteins into their biologically active products. This encoded protein is a calcium-dependent serine endoprotease th at can cleave precursor protein at their paired basic amino acid processing sites. Some of its sub strates are - transforming growth factor beta related proteins, proalbumin, and von Willebrand fact or. This gene is thought to play a role in tumor progression. Alternatively spliced transcript variants encoding different isoforms have been identified. [provided by RefSeq
