## PAX5 rabbit monoclonal antibody

Catalog # H00005079-K

ocification

Size 100 ug x up to 3

Specification	
Product Description	Rabbit monoclonal antibody raised against a human PAX5 peptide using ARM Technology.
Immunogen	A synthetic peptide of human PAX5 is used for rabbit immunization. Customer or Abnova will decide on the preferred peptide sequence.
Host	Rabbit
Library Construction	Non-fusion antibody library from rabbit spleen (ARM Technology).
Expression	Overexpression vector and transfection into 293H cell line.
Reactivity	Human
Purification	Protein A
lsotype	lgG
Quality Control Testing	Antibody reactive against human PAX5 peptide by ELISA and mammalian transfected lysate by We stern Blot.
Storage Buffer	In 1x PBS, pH 7.4
Storage Instruction	Store at -20°C or lower. Aliquot to avoid repeated freezing and thawing.
Deliverable	Up to three rabbit IgG clones of 100 ug each will be delivered to customer.
Note	<ol> <li>Customer may provide cell or tissue lysate for antibody screening.</li> <li>Rabbit monoclonal antibody generated by ARM technology is amenable to antibody engineering in cluding F(ab)<sub>2</sub>, lgG, scFv and different Fc and non-Fc conjugates per customer request.</li> </ol>

## Applications

• Western Blot (Transfected lysate)

Protocol Download

• ELISA

Gene Info — PAX5	
Entrez GenelD	<u>5079</u>
GeneBank Accession#	PAX5
Gene Name	PAX5
Gene Alias	BSAP
Gene Description	paired box 5
Omim ID	<u>167414</u>
Gene Ontology	Hyperlink
Gene Summary	This gene encodes a member of the paired box (PAX) family of transcription factors. The central f eature of this gene family is a novel, highly conserved DNA-binding motif, known as the paired bo x. PAX proteins are important regulators in early development, and alterations in the expression o f their genes are thought to contribute to neoplastic transformation. This gene encodes the B-cell li neage specific activator protein that is expressed at early, but not late stages of B-cell differentiati on. Its expression has also been detected in developing CNS and testis and so the encoded prot ein may also play a role in neural development and spermatogenesis. This gene is located at 9p1 3, which is involved in t(9;14)(p13;q32) translocations recurring in small lymphocytic lymphomas of the plasmacytoid subtype, and in derived large-cell lymphomas. This translocation brings the pote nt E-mu enhancer of the IgH gene into close proximity of the PAX5 promoter, suggesting that the deregulation of transcription of this gene contributes to the pathogenesis of these lymphomas. Alt ernatively spliced transcript variants encoding different isoforms have been described but their bi ological validity has not been determined. [provided by RefSeq
Other Designations	B-cell lineage specific activator paired box homeotic gene 5 transcription factor PAX 5

## Disease

- Precursor B-Cell Lymphoblastic Leukemia-Lymphoma
- Tobacco Use Disorder
