Gene Description

chromatin modifying protein 1A

Omim ID[164010](#)**Gene Ontology**[Hyperlink](#)**Gene Summary**

This gene encodes a member of the CHMP/Chmp family of proteins which are involved in multivesicular body sorting of proteins to the interiors of lysosomes. The initial prediction of the protein sequence encoded by this gene suggested that the encoded protein was a metallopeptidase. The nomenclature has been updated recently to reflect the correct biological function of this encoded protein. [provided by RefSeq]
