

PGR monoclonal antibody (M05), clone 1B11

Catalog # H00005241-M05

Size 100 ug

Applications

Western Blot (Cell lysate)

PGR monoclonal antibody (M05), clone 1B11 Western Blot analysis of PGR expression in K-562 (Cat # L009V1).

Immunohistochemistry (Formalin/PFA-fixed paraffin-embedded sections)

Immunoperoxidase of monoclonal antibody to PGR on formalin-fixed paraffin-embedded human endometrium. [antibody concentration 1.5 ug/ml]

Sandwich ELISA (Recombinant protein)

Detection limit for recombinant GST tagged PGR is approximately 0.03ng/ml as a capture antibody.

Immunofluorescence

Immunofluorescence of monoclonal antibody to PGR on MCF-7 cell . [antibody concentration 10 ug/ml]

Western Blot detection against Immunogen (37.84 KDa) .

Specification

Product Description

Mouse monoclonal antibody raised against a partial recombinant PGR. This PGR gene uses two distinct promoters and translation start sites in the first exon to produce two isoforms, A and B. The two isoforms are identical except for the additional 165 amino acids found in the N-terminus of isoform B. Our immunogen corresponds to the specific region of isoform B, thus this antibody is a PGR isoform B specific antibody.

Immunogen

PGR (NP_000917, 1 a.a. ~ 110 a.a) partial recombinant protein with GST tag. MW of the GST tag alone is 26 KDa.

Sequence

MTELKAKGPRAPHVAGGPPSPEVGSPLLCRPAAGPFGSQTSDLPEVSAIPISLDGLLFPRPCQ
GQDPSDEKTQDQQSLSDVEGAYSRAEATRGAGGSSSSPPEKDSGL

Host

Mouse

Reactivity

Human

Interspecies Antigen Sequence

Mouse (62); Rat (60)

Isotype

IgG1 Kappa

Quality Control Testing

Antibody Reactive Against Recombinant Protein.
Western Blot detection against Immunogen (37.84 KDa) .

Storage Buffer

In 1x PBS, pH 7.4

Storage Instruction

Store at -20°C or lower. Aliquot to avoid repeated freezing and thawing.

Applications

- Western Blot (Cell lysate)

PGR monoclonal antibody (M05), clone 1B11 Western Blot analysis of PGR expression in K-562 (Cat # L009V1).

Gene Summary

This gene encodes a member of the steroid receptor superfamily. The encoded protein mediates the physiological effects of progesterone, which plays a central role in reproductive events associated with the establishment and maintenance of pregnancy. This gene uses two distinct promoters and translation start sites in the first exon to produce two isoforms, A and B. The two isoforms are identical except for the additional 165 amino acids found in the N-terminus of isoform A only, and mediate their own response genes and physiologic effects with little overlap. The location of transcription initiation for isoform B has not been clearly determined. [provided by RefSeq]
