Gene Ontology	Hyperlink
Gene Summary	The protein encoded by this gene is a pyruvate kinase that catalyzes the transphosphorylation of phosphoenolpyruvate into pyruvate and ATP, which is the rate-limiting step of glycolysis. Defects in this enzyme, due to gene mutations or genetic variations, are the common cause of chronic hereditary nonspherocytic hemolytic anemia (CNSHA or HNSHA). Multiple transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq]
Other Designations	R-type/L-type pyruvate kinase pyruvate kinase 1 pyruvate kinase isozyme R/L pyruvate kinase type L pyruvate kinase, liver and RBC type pyruvate kinase, liver and blood cell red cell/liver pyruvate kinase
