

POMC 293T Cell Transient Overexpression Lysate(Denatured)

Catalog # H00005443-T01

Size 100 uL

Applications

SDS-PAGE Gel

POMC transfected lysate.

Western Blot

Lane 1: POMC transfected lysate (29.48 KDa)

Lane 2: Non-transfected lysate.

Specification

Transfected Cell Line 293T

Plasmid pCMV-POMC full-length

Host Human

Theoretical MW (kDa) 29.48

Quality Control Testing Transient overexpression cell lysate was tested with Anti-POMC antibody ([H00005443-B01](#)) by Western Blots.
 SDS-PAGE Gel
 POMC transfected lysate.
 Western Blot
 Lane 1: POMC transfected lysate (29.48 KDa)
 Lane 2: Non-transfected lysate.

Storage Buffer

1X Sample Buffer (50 mM Tris-HCl, 2% SDS, 10% glycerol, 300 mM 2-mercaptoethanol, 0.01% Bromophenol blue)

Storage Instruction

Store at -80°C. Aliquot to avoid repeated freezing and thawing.

Applications

- Western Blot

Gene Info — POMC

POMC

Gene Alias

ACTH, CLIP, LPH, MSH, NPP, POC

Gene Description

proopiomelanocortin

Omim ID[176830 609830](#)**Gene Ontology**[Hyperlink](#)**Gene Summary**

This gene encodes a polypeptide hormone precursor that undergoes extensive, tissue-specific, post-translational processing via cleavage by subtilisin-like enzymes known as prohormone convertases. There are eight potential cleavage sites within the polypeptide precursor and, depending on tissue type and the available convertases, processing may yield as many as ten biologically active peptides involved in diverse cellular functions. The encoded protein is synthesized mainly in corticotroph cells of the anterior pituitary where four cleavage sites are used; adrenocorticotrophin, essential for normal steroidogenesis and the maintenance of normal adrenal weight, and lipotropin beta are the major end products. In other tissues, including the hypothalamus, placenta, and epithelium, all cleavage sites may be used, giving rise to peptides with roles in pain and energy homeostasis, melanocyte stimulation, and immune modulation. These include several distinct melanotropins, lipotropins, and endorphins that are contained within the adrenocorticotrophin and beta-lipotropin peptides. Mutations in this gene have been associated with early onset obesity, adrenal insufficiency, and red hair pigmentation. Alternatively spliced transcript variants encoding the same protein have been described. [provided by RefSeq]
