Gene Description

retinoic acid receptor responder (tazarotene induced) 2

Omim ID[601973](#)**Gene Ontology**[Hyperlink](#)**Gene Summary**

This gene encodes a secreted chemotactic protein that initiates chemotaxis via the ChemR23 G protein-coupled seven-transmembrane domain ligand. Expression of this gene is upregulated by the synthetic retinoid tazarotene and occurs in a wide variety of tissues. The active protein has several roles, including that as an adipokine, and is truncated on both termini from the proprotein. [provided by RefSeq]
