Gene Name RARRES3

Gene Alias HRASLS4, MGC8906, RIG1, TIG3

Gene Description retinoic acid receptor responder (tazarotene induced) 3

Omim ID [605092](#)

Gene Ontology [Hyperlink](#)

Gene Summary Retinoids exert biologic effects such as potent growth inhibitory and cell differentiation activities and are used in the treatment of hyperproliferative dermatological diseases. These effects are mediated by specific nuclear receptor proteins that are members of the steroid and thyroid hormone receptor superfamily of transcriptional regulators. RARRES1, RARRES2, and RARRES3 are genes whose expression is upregulated by the synthetic retinoid tazarotene. RARRES3 is thought to act as a tumor suppressor or growth regulator. Other Designations retinoic acid-inducible gene 1
