Gene Summary This gene is a type I subclass member of the Reg gene family. The Reg gene family is a multigen e family grouped into four subclasses, types I, II, III and IV, based on the primary structures of the e ncoded proteins. This gene encodes a protein that is secreted by the exocrine pancreas. It is ass ociated with islet cell regeneration and diabetogenesis and may be involved in pancreatic lithoge nesis. Reg family members REG1B, REGL, PAP and this gene are tandemly clustered on chrom osome 2p12 and may have arisen from the same ancestral gene by gene duplication. [provided b y RefSeq
