Gene Ontology	<u>Hyperlink</u>
Gene Summary	Ribosomes, the organelles that catalyze protein synthesis, consist of a small 40S subunit and a la rge 60S subunit. Together these subunits are composed of 4 RNA species and approximately 80 structurally distinct proteins. This gene encodes a ribosomal protein that is a component of the 60 S subunit. The protein belongs to the L18AE family of ribosomal proteins. It is located in the cytopl asm. This gene is co-transcribed with the U68 snoRNA, which is located in its third intron. As is ty pical for genes encoding ribosomal proteins, there are multiple processed pseudogenes of this g ene dispersed through the genome. [provided by RefSeq
