

RPS20 rabbit monoclonal antibody

Catalog # H00006224-K Size 100 ug x up to 3

| Specification | |
|-------------------------|---|
| Product Description | Rabbit monoclonal antibody raised against a human RPS20 peptide using ARM Technology. |
| Immunogen | A synthetic peptide of human RPS20 is used for rabbit immunization. Customer or Abnova will decide on the preferred peptide sequence. |
| Host | Rabbit |
| Library Construction | Non-fusion antibody library from rabbit spleen (<u>ARM Technology</u>). |
| Expression | Overexpression vector and transfection into 293H cell line. |
| Reactivity | Human |
| Purification | Protein A |
| Isotype | lgG |
| Quality Control Testing | Antibody reactive against human RPS20 peptide by ELISA and mammalian transfected lysate by W estern Blot. |
| Storage Buffer | In 1x PBS, pH 7.4 |
| Storage Instruction | Store at -20°C or lower. Aliquot to avoid repeated freezing and thawing. |
| Deliverable | Up to three rabbit lgG clones of 100 ug each will be delivered to customer. |
| Note | Customer may provide cell or tissue lysate for antibody screening. Rabbit monoclonal antibody generated by ARM technology is amenable to antibody engineering in cluding F(ab)₂, lgG, scFv and different Fc and non-Fc conjugates per customer request. |

Applications

Western Blot (Transfected lysate)

Protocol Download

ELISA

| Gene Info — RPS20 | |
|---------------------|---|
| Entrez GenelD | 6224 |
| GeneBank Accession# | RPS20 |
| Gene Name | RPS20 |
| Gene Alias | FLJ27451, MGC102930 |
| Gene Description | ribosomal protein S20 |
| Omim ID | 603682 |
| Gene Ontology | Hyperlink |
| Gene Summary | Ribosomes, the organelles that catalyze protein synthesis, consist of a small 40S subunit and a la rge 60S subunit. Together these subunits are composed of 4 RNA species and approximately 80 structurally distinct proteins. This gene encodes a ribosomal protein that is a component of the 40 S subunit. The protein belongs to the S10P family of ribosomal proteins. It is located in the cytopla sm. This gene is co-transcribed with the small nucleolar RNA gene U54, which is located in its se cond intron. As is typical for genes encoding ribosomal proteins, there are multiple processed ps eudogenes of this gene dispersed through the genome. Two transcript variants encoding different isoforms have been identified for this gene. [provided by RefSeq |
| Other Designations | 40S ribosomal protein S20 |
