Gene Name	SOX11
Gene Alias	-
Gene Description	SRY (sex determining region Y)-box 11
Omim ID	600898
Gene Ontology	Hyperlink
Gene Summary	This intronless gene encodes a member of the SOX (SRY-related HMG-box) family of transcription factors involved in the regulation of embryonic development and in the determination of the cell fate. The encoded protein may act as a transcriptional regulator after forming a protein complex with other proteins. The protein may function in the developing nervous system and play a role in tumorigenesis. [provided by RefSeq]
