Gene Name	TAGLN
Gene Alias	DKFZp686P11128, SM22, SMCC, TAGLN1, WS3-10
Gene Description	transgelin
Omim ID	600818
Gene Ontology	Hyperlink
Gene Summary	The protein encoded by this gene is a transformation and shape-change sensitive actin cross-linking/gelling protein found in fibroblasts and smooth muscle. Its expression is down-regulated in many cell lines, and this down-regulation may be an early and sensitive marker for the onset of transformation. A functional role of this protein is unclear. Two transcript variants encoding the same protein have been found for this gene. [provided by RefSeq]
Other Designations	SM22-alpha transgelin variant 2
