Gene Description thyroid hormone receptor interactor 6

Omim ID [602933](#)

Gene Ontology [Hyperlink](#)

Gene Summary This gene is a member of the zyxin family and encodes a protein with three LIM zinc-binding domains. This protein localizes to focal adhesion sites and along actin stress fibers. Recruitment of this protein to the plasma membrane occurs in a lysophosphatidic acid (LPA)-dependent manner and it regulates LPA-induced cell migration. Alternatively spliced variants which encode different protein isoforms have been described; however, not all variants have been fully characterized. [provided by RefSeq]

Other Designations OPA-interacting protein 1|thyroid receptor-interacting protein 6|zyxin related protein 1
