Gene Name XRCC1

Gene Alias RCC

Gene Description X-ray repair complementing defective repair in Chinese hamster cells 1

Omim ID [194360](#)

Gene Ontology [Hyperlink](#)

Gene Summary The protein encoded by this gene is involved in the efficient repair of DNA single-strand breaks formed by exposure to ionizing radiation and alkylating agents. This protein interacts with DNA ligase III, polymerase beta and poly (ADP-ribose) polymerase to participate in the base excision repair pathway. It may play a role in DNA processing during meiosis and recombination in germ cells. A rare microsatellite polymorphism in this gene is associated with cancer in patients of varying radiosensitivity.
