Entrez GeneID	7913
GeneBank Accession#	BC035259
Protein Accession#	no protein_acc
Gene Name	DEK
Gene Alias	D6S231E
Gene Description	DEK oncogene
Omim ID	125264
Gene Ontology	Hyperlink
Gene Summary	This gene encodes a protein with one SAP domain. This protein binds to cruciform and superhelical DNA and induces positive supercoils into closed circular DNA, and is also involved in splice site selection during mRNA processing. Chromosomal aberrations involving this region, increased expression of this gene, and the presence of antibodies against this protein are all associated with various diseases. Two transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq]
