Protein Accession#	AAH47870
Gene Name	SKAP1
Gene Alias	SCAP1, SKAP55
Gene Description	src kinase associated phosphoprotein 1
Omim ID	604969
Gene Ontology	Hyperlink
Gene Summary	<p>This gene encodes a T cell adaptor protein, a class of intracellular molecules with modular domains capable of recruiting additional proteins but that exhibit no intrinsic enzymatic activity. The encoded protein contains a unique N-terminal region followed by a PH domain and C-terminal SH3 domain. Along with the adhesion and degranulation-promoting adaptor protein, the encoded protein plays a critical role in inside-out signaling by coupling T-cell antigen receptor stimulation to the activation of integrins. Other Designations	src family associated phosphoprotein 1 src kinase-associated phosphoprotein of 55 kDa
