Gene Info — TOP3B	
Entrez GenelD	8940
GeneBank Accession#	TOP3B
Gene Name	TOP3B
Gene Alias	FLJ39376
Gene Description	topoisomerase (DNA) III beta
Omim ID	603582
Gene Ontology	<u>Hyperlink</u>
Gene Summary	This gene encodes a DNA topoisomerase, an enzyme that controls and alters the topologic state s of DNA during transcription. This enzyme catalyzes the transient breaking and rejoining of a sing le strand of DNA which allows the strands to pass through one another, thus relaxing the supercoil s and altering the topology of DNA. The enzyme interacts with DNA helicase SGS1 and plays a role in DNA recombination, cellular aging and maintenance of genome stability. Alternative splicing of the C-terminus of this gene results in three transcript variants which have distinct tissue specific ity; however, not all variants have been fully described.
