Gene Name WDR1

Gene Alias AIP1, NORI-1

Gene Description WD repeat domain 1

Omim ID [604734](#)

Gene Ontology [Hyperlink](#)

Gene Summary This gene encodes a protein containing 9 WD repeats. WD repeats are approximately 30- to 40-amino acid domains containing several conserved residues, mostly including a trp-asn at the C-terminal end. WD domains are involved in protein-protein interactions. The encoded protein may help induce the disassembly of actin filaments. Two transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq]
