Gene Name YAF2

Gene Alias MGC41856

Gene Description YY1 associated factor 2

Omim ID [607534](#)

Gene Ontology [Hyperlink](#)

Gene Summary The protein encoded by this gene interacts with YY1, a zinc finger protein involved in negative regulation of muscle-restricted genes. This gene product itself contains a single N-terminal C2-X10-C2 zinc finger, and in contrast to YY1, is up-regulated during myogenic differentiation. It also facilitates proteolytic cleavage of YY1 by the calcium- activated protease, m-calpain, suggesting a mechanism by which this protein antagonizes the negative effect of YY1.
