Gene Description

deleted in liver cancer 1

Omim ID[604258](#)**Gene Ontology**[Hyperlink](#)**Gene Summary**

This gene is deleted in the primary tumor of hepatocellular carcinoma. It maps to 8p22-p21.3, a region frequently deleted in solid tumors. It is suggested that this gene is a candidate tumor suppressor gene for human liver cancer, as well as for prostate, lung, colorectal, and breast cancers. Alternative splicing at this locus results in several transcript variants encoding different isoforms. [provided by RefSeq]
